

A three-feature panel transfers a force-associated unit signal

10,000-prompt TopK-128 SAEs | final-token swap | 16 held-out systems

A Causal patch design

B Held-out effect and compactness

Interpretation: the panel transfers a selective force-associated logit signal; it does not replace the model's energy answer.

Feature ranks were fixed on eight discovery systems and evaluated on sixteen disjoint confirmation systems. Mass is the matched donor control.
