

A three-feature panel selectively supports capital retrieval

10,000 relation-balanced prompts | TopK-128 SAEs | 16 disjoint confirmation countries

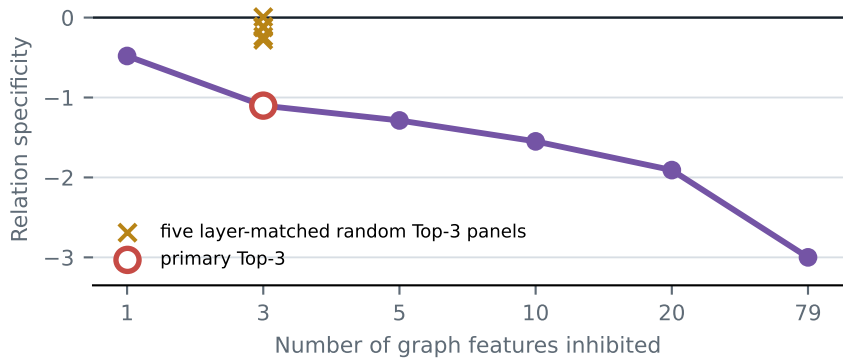

A Hypothesised multi-step relation

B Primary Top-3 confirmation

C Compactness and random controls

15/16 paired effects were negative; 0/16 interventions changed a capital prediction into the country name.

The result supports a capital-relation-associated influence. It does not by itself establish an explicit city-to-country intermediate step.
