

A graph-seeded carry panel passes held-out specificity

10,000-prompt TopK-256 SAEs | final-token inhibition | 24 disjoint confirmation pairs

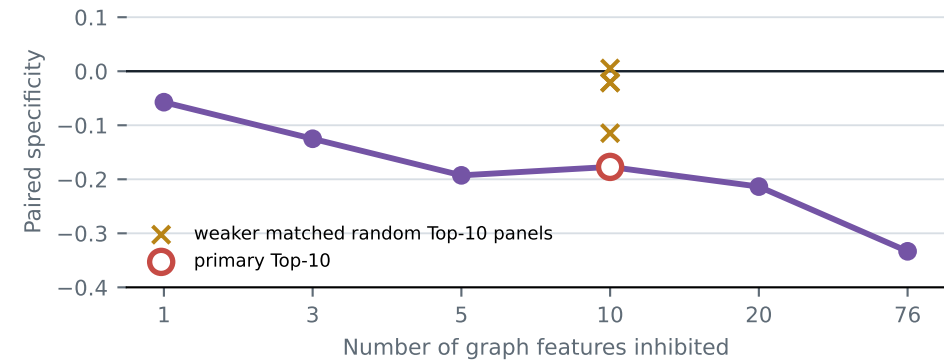

A Graph seed and discovery ranking

B Primary confirmation effect

C Compactness and matched controls

Feature ranking used eight discovery pairs; confirmation used twenty-four disjoint pairs absent from the SAE corpus. The primary outperformed four of five matched random panels; the full control set is retained in the backup figure.
